

**Annual Drinking Water Quality Report for 2025**  
**Glenerie Water District**  
**1 Town Hall Drive – Lake Katrine, New York 12449**  
**(Public Water Supply ID# 5530247)**

**INTRODUCTION**

To comply with State and Federal regulations, the Glenerie Water District will be annually issuing a report describing the quality of your drinking water. The purpose of this report is to raise your understanding of drinking water and your awareness of the need to protect our drinking water sources. This report provides an overview of last year’s water quality. Included are details about where your water comes from, what it contains, and how it compares to State standards.

If you have any questions about this report or concerning your drinking water, please contact **John Rose, Water Superintendent**, at **845-382-1833** or the **Ulster County Health Department at 845-340-3010**. If you would prefer contacting us via e-mail, our address is **watersewer@townofulster.ny.gov**. We want you to be informed about your drinking water. If you want to learn more, please attend any of our regularly scheduled town board meetings. The meetings are held at **7:00 p.m.** on the **third Thursday** of each month at the Town Hall located at 1 Town Hall Drive in Lake Katrine, New York.

**WHERE DOES OUR WATER COME FROM?**

In general, the sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and can pick up substances resulting from the presence of animals or from human activities. Contaminants that may be present in source water include: microbial contaminants; inorganic contaminants; pesticides and herbicides; organic chemical contaminants; and radioactive contaminants. In order to ensure that tap water is safe to drink, the State and the EPA prescribe regulations, which limit the amount of certain contaminants in water provided by public water systems. The State Health Department and the FDA’s regulations establish limits for contaminants in bottled water as well, which must provide the same protection for public health.

Our water source is drawn from wells, which are located on Fording Place Road and Parish Lane in Lake Katrine. The water is pumped from the wells to the treatment plant where it is softened and chlorine and potassium permanganate are added to enhance the iron removal process as it passes through the Ferrosand “cr” filters. The water is disinfected again with chlorine as it leaves the plant.

Through an agreement with the City of Kingston’s Board of Water Commissioners, the Ulster Water Department purchased 700,000 gallons of water per day from the Kingston Water Department in 2025. Some of this water is blended with water produced at our Ulster Water plant and is part of the total gallons of water purchased by the Glenerie Water District listed below under facts and figures. A copy of the City of Kingston’s Annual Drinking Water Quality Report is available by contacting the Ulster Water Department at 845-382-1833.

**FACTS AND FIGURES**

As of 12/31/2025 there were 185 water services throughout the district. The total water purchased in calendar year 2025 was 9,089,125 gallons or an average of approximately 24,902 per day. The amount of water delivered to customers was 7,979,054 gallons. In 2025 there was an unaccountable water loss total of approximately 11%. Unaccountable water loss comes from various sources such as, but not limited to, water main breaks, main flushing, street sweeping and firefighting. Water rates for the Glenerie Water District were as follows: The first 5000 gallons (minimum charge) was \$30.50; 5001 gallons and above was \$5.06 per thousand gallons or portion thereof.

**ARE THERE CONTAMINANTS IN OUR DRINKING WATER?**

As the State regulations require, we routinely test your drinking water for numerous contaminants. These contaminants include: total coliform, inorganic compounds, nitrate, nitrite, lead and copper, volatile organic compounds, total trihalomethanes, and synthetic organic compounds. The table presented below depicts which compounds were detected in your drinking water. The State allows us to test for some contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of our data, though representative, may be more than one year old.

<b>Table of Detected Contaminants</b>							
Contaminant	Violation Yes / No	Date of Sample	Level Detected/ Average (Range)	Unit of Measurement	MCLG	Regulatory Limit MCL,TT, or AL	Likely Source of Contaminant
<b>Lead (1)</b>	No	9/18/2024	2.4 (<1.0-17)	ug/L	0	AL=15	Corrosion of household plumbing; Erosion of natural deposits.
<b>Copper (2)</b>	No	9/18/2024	980 (<10-1500)	ug/L	1300	AL=1300	Corrosion of household plumbing systems; Erosion of natural deposits.
<b>Sodium (3)</b>	No	12/16/14	86.1	mg/L	N/A	See footnote #3	Naturally occurring; Water softeners; Road salt; Animal waste.
<b>TTHM’s stage 2 Trihalomethanes</b>	No	2025	75.53 (46.4-92.6)	ug/L	N/A	MCL=80	By product of drinking water chlorination.
<b>HAA5’s stage 2 Haloacetic Acid</b>	No	2025	25.48 (16.2-32.8)	ug/L	N/A	MCL=60	By product of drinking water chlorination.
<b>Turbidity (4)</b>	No	2025	.23	NTU	NA	TT=<1NTU	Soil Run off
<b>Barium</b>	No	10/09/2024	83	ug/l	2000	2000	Erosion of natural deposits; Discharge of drilling wastes; Discharge from metal refineries.
<b>Nitrate</b>	No	6/26/2025	<0.25	mg/l	10	MCL=10	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits
<b>Nickel</b>	No	10/09/2024	1.1	ug/L	N/A	N/A	

**Notes:**

- 1- The level represents the 90<sup>th</sup> percentile of the 20 sites tested. A percentile is a value on a scale of 100 that indicates the percent of a distribution that is equal to or below it. The 90<sup>th</sup> percentile is equal to or greater than 90% of the lead values detected at our water system. Out of the 20 samples that were collected the 90<sup>th</sup> percentile value was 2.4 ug/L. Although the 90<sup>th</sup> percentile level did not exceed the action level, the action level for lead was exceeded at one of the 20 samples. Please see below for more information on lead under “What does this information mean”.
- 2- The level presented represents the 90<sup>th</sup> percentile of the 20 sites tested. A percentile is a value on a scale of 100 that indicates the percent of a distribution that is equal to or below it. The 90<sup>th</sup> percentile is equal to or greater than 90% of the copper values detected at our water system. Out of the 20 samples that were collected the 90<sup>th</sup> percentile value was 980 ug/l. The action level for copper was exceeded at one of the sites tested.
- 3- Water containing more than 20 mg/l of sodium should not be used for drinking by people on severely restricted sodium diets. Water containing more than 270 mg/l of sodium should not be used for drinking by people on moderately restricted sodium diets.
- 4- Turbidity is a measure of the cloudiness of the water. We monitor it because it is a good indicator of water quality. High turbidity can hinder the effectiveness of disinfectants. Of the 52 total tests taken for turbidity this year the average was .23 NTU. State regulations require that 95% of turbidity samples collected have measurements below 0.3NTU and that all turbidity samples results are less than 1NTU.

**Definitions:**

**Maximum Contaminant Level (MCL):** The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the

MCLGs as feasible.

**Maximum Contaminant Level Goal (MCLG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

**Action Level (AL):** The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

**Maximum Residual Disinfection Level (MRDL):** The highest level of a drinking water disinfection allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

**Maximum Residual Disinfection Level Goal: (MRDLG):** The level of a drinking water disinfectant below which there is no known or expected health risk. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

**Milligrams per liter (mg/l):** Corresponds to one part of liquid in one million parts of liquid (parts per million - ppm).

**Micrograms per liter (ug/l):** Corresponds to one part of liquid in one billion parts of liquid (parts per billion - ppb).

**Treatment Technique (TT):** A required process intended to reduce the level of a contaminant in drinking water.

**Nephelometric Turbidity Unit (NTU):** A measure of the clarity of water. Turbidity in excess of 5 NTU is just noticeable to the average person.

It should be noted that all drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline (800-426-4791) or the Ulster County Health Department at 340-3010.

#### WHAT DOES THIS INFORMATION MEAN?

Lead can cause serious health effects in people of all ages, especially pregnant people, infants (both formula-fed and breastfed), and young children. Lead in drinking water is primarily from materials and parts used in service lines and in home plumbing. Town of Ulster Water Department is responsible for providing high quality drinking water and removing lead pipes but cannot control the variety of materials used in the plumbing in your home. Because lead levels may vary over time, lead exposure is possible even when your tap sampling results do not detect lead at one point in time. You can help protect yourself and your family by identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk. Using a filter, certified by an American National Standards Institute accredited certifier to reduce lead, is effective in reducing lead exposures. Follow the instructions provided with the filter to ensure the filter is used properly. Use only cold water for drinking, cooking, and making baby formula. Boiling water does not remove lead from water. Before using tap water for drinking, cooking, or making baby formula, flush your pipes for several minutes. You can do this by running your tap, taking a shower, doing laundry or a load of dishes. If you have a lead service line or galvanized requiring replacement service line, you may need to flush your pipes for a longer period. If you are concerned about lead in your water and wish to have your water tested, contact the Town of Ulster Water Department at (845) 382-1833. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available <https://www.epa.gov/ground-water-and-drinking-water/basic-information-about-lead-drinking-water>.

#### INFORMATION ON LEAD SERVICE LINE INVENTORY

A Lead Service Line (LSL) is defined as any portion of pipe that is made of lead which connects the water main to the building inlet. An LSL may be owned by the water system, owned by the property owner, or both. The inventory includes both potable and nonpotable SLs within a system. In accordance with the federal Lead and Copper Rule Revisions (LCRR) our system has prepared a lead service line inventory and have made it publicly accessible by visiting <https://www.townofulster.ny.gov/departments/water-department/>. Your water district has no lead, galvanized requiring replacement, or lead status unknown service lines. If you have any question or concerns regarding the Lead Service Line Inventory please contact the Town of Ulster Water Department at (845) 382-1833.

#### Do I Need To Take Special Precautions?

Although our drinking water met or exceeded state and federal regulations, some people may be more vulnerable to disease causing microorganisms or pathogens in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice from their health care provider about their drinking water. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cyptosporidium*, *Giardia* and other microbial pathogens are available from the Safe Water Hotline (800-426-4791)

#### Is Our Water System Meeting Other Rules That Govern Operations?

During 2025 our system was in compliance with all applicable State drinking water operating, monitoring and reporting requirements.

#### Why Save Water and How Do We Avoid Wasting It?

Although our area is very fortunate to have access to a water supply which more than meets our demands, conservation efforts by both the town and the consumer are prudent in deterring increasing costs. As a consumer you can participate in this water conservation effort. The following are some ideas that can be directly applied to your individual homes: 1) Use water-saving, flow-restricting shower heads and low flow faucets (aerators); 2) Repair dripping faucets and toilets that seem to flush by themselves; 3) Replace your toilet with a low flush model or place a brick in your tank to reduce the volume used on each flush; 4) Water your garden and lawn only when necessary. Remember that a layer of mulch in the flower beds and garden is not only aesthetically pleasing but will help retain moisture; 5) Water your lawn after 6:00pm, as this prevents water loss due to evaporation; 6) When washing your car don't let the hose run continuously; and 7) When brushing your teeth, or when shaving or shampooing your hair try to avoid running the water unnecessarily; and lastly try whenever possible to wash clothes and run the dishwasher only when you have a full load.

#### Source Water Assessment:

The New York State Department of Health has completed a source water assessment for Well #2 and Well #3 of this system, based on available information. Possible and actual threats to these drinking water sources were evaluated. The state source water assessment includes a susceptibility rating based on the risk posed by each potential source of contamination and how easily contaminants can move through the subsurface to the wells. The susceptibility rating is an estimate of the potential for contamination of source water, but it **does not** mean the water delivered to consumers is, or will become contaminated. The source water assessments provide resource managers with additional information for protecting source waters in the future.

The source water assessment has rated these wells as having a high susceptibility to microbials, nitrates, industrial solvents and other industrial contaminants. These ratings are due primarily to the close proximity of permitted discharge facility (industrial/commercial facilities that discharge wastewater into the environment and are regulated by the state and/or federal government); a hazardous waste facility; a toxic chemical release facility; and low intensity residential activities in the assessment area. In addition, the wells draw from an unconfined aquifer and the overlying soils do not provide adequate protection from potential contamination. Please note that, while the source water assessment rates our wells as being susceptible to microbials, our water is disinfected to ensure that the finished water delivered to your home meets the New York State drinking water standards for microbial contamination.

A copy of this assessment, including a map of the assessment area, can be obtained by contacting us at the number listed above.

#### System Improvements:

11/2025 Replaced 8" Master Meter and removed 2" Master Meter.

10/2025 Flushed all Fire hydrants throughout the district.

**Security:**

This water system has increased preventive security measures to protect the water supply from vandalism. The public can also assist us by reporting any suspicious activities around water department facilities or properties.

**Closing:**

Thank you for allowing us to continue to provide your family with quality drinking water this year. We ask that all our customers help us protect our water sources, which are the heart of our community and our way of life. Please call our office if you have any questions.
